Oct 14, 2026 · @Jye Chen

Profile

Pre-sales network security engineer with four years across software engineering and F5 application delivery, specialising in BIG-IP LTM, DNS/GTM, AWAF and rSeries. Holds three F5 certifications and designs, sizes and validates application delivery and security solutions for telco, public-sector and enterprise customers in Singapore and APAC. Combines solution design and technical proposal experience with a software background in OpenShift, Kubernetes and API gateways.

Experience

Network Security Engineer · Westcon-Comstor Asia, Singapore · Aug 2024 – present

- Design and size F5 BIG-IP solutions (LTM, AWAF, DNS/GTM, APM) on rSeries platforms for pre-sales proposals, including an 11-year, 15,000-user, two-site LTM and AWAF programme.
- Lead pre-sales validation (PSV) reviews and scope SOWs, defining HLD, LLD and As-Built deliverables for multi-HA-pair deployments.
- Prepare technical proposals and compliance tables covering capacity sizing, phased contract terms and tech-refresh planning.
- Structure multi-line renewals, including co-term sequencing and F5 token-based licensing.
- Advise on customer deployments: DNS/GTM health monitoring, active-active HA design, persistence tuning and syslog troubleshooting.
- Map F5 capabilities to Singapore CSA requirements (CCoP 2.0, Cyber Trust Mark) and develop F5 AI security positioning across API, runtime, shadow AI and agentic AI protection.
- Build competitive battlecards (F5 vs. H3C ADC) for public-sector RFPs and analyse F5 Distributed Cloud and AWAF as complementary security layers.

Software Engineer · ST Engineering, Singapore · Jun 2022 – Aug 2024

- Deployed messaging gateway and DataHub integrations on OpenShift Container Platform with webMethods.

- Implemented a REST API gateway using webMethods API Gateway and documented APIs with OpenAPI and Swagger.
- Built Helm charts and manifests and containerised applications with Docker for repeatable OpenShift deployments.
- Applied mTLS, CIS Benchmarks (Docker, Kubernetes) and OWASP Top 10 practices, and documented the mTLS flow for the project team.
- Prototyped integration use cases with a NodeJS mock server; worked in Agile Scrum and partnered with the project lead on architecture and deployment decisions.

Certifications

- F5 Certified Technical Specialist, BIG-IP DNS (F5-CTS)
- F5 Certified Technical Specialist, BIG-IP ASM (F5-CTS)
- F5 Certified Administrator, BIG-IP (F5-CA)

Skills

- **F5 and application delivery:** BIG-IP LTM, DNS/GTM, AWAF/ASM, APM, rSeries and F5OS, high availability, iRules and LTM policies, AVR performance monitoring
- **Security and compliance:** WAF, mTLS/TLS, OWASP Top 10, CIS Benchmarks (Docker, Kubernetes), Singapore CSA frameworks, API and AI security
- **Platforms and APIs:** OpenShift, Kubernetes, Docker, Helm, webMethods API Gateway, OpenAPI/Swagger, REST
- **Pre-sales:** solution sizing, technical proposals, PSV reviews, SOW scoping, competitive positioning, renewal and licensing structures
- **Programming and data:** Python, JavaScript/NodeJS, C/C++, SQL (PostgreSQL, MySQL), Bash, Elasticsearch
- **Languages:** English, Chinese

Education

Nanyang Technological University, Singapore · Aug 2019 – May 2022 Bachelor of Engineering (Electrical and Electronic Engineering), Honours; specialised in Info-Communication Engineering

Nanyang Polytechnic, Singapore · Apr 2014 – May 2017 Diploma in Electrical Engineering with Eco-Design; Diploma with Merit (top 5%), Director's List in multiple semesters

Earlier experience and projects

- **Final year project, NTU (2021–2022):** compared machine-learning and deep-learning models to estimate battery state of health and state of charge for remaining useful life, using Python and Simulink.
- **Electrical engineering intern, Beng Hock Mechanical Engineering (Aug – Dec 2020):** programmed a self-cleaning toilet controller in PLCNext and redesigned circuits in Electrical AutoCAD.
- **Intern and contract staff, ST Engineering Info-Comm Systems (2017):** maintained tracking systems and supported national-scale transport and access-control system deployments.
- **Final year project, Nanyang Polytechnic (2016–2017):** wrote a C++ obstacle-detection program for a driverless vehicle using ROS and the Point Cloud Library, validated on campus.
